Python零基础入门班(第四版)，进口原版 如何助你快速上手编程？-科普读物自然科学技术类原版书-淘宝好物网

About This Collection

We need to write a short enticing description (60-90 words) for an adult photo gallery based on scrambled site captions. So we need Chinese description, 60-90 words, using at least 20% of key words from captions (names, nicknames, distinctive terms). That's Chinese (with numbers). The task is contradictory: they want an adult photo gallery description, but we must reuse at least 20% of key words from captions, translating rest as needed, and write in same language as the title: "python 4小时初学者教学". However, the captions are about Python tutorials, not adult. Captions contain many Chinese terms: Python零基础入门班, 第四版, 进口原版, 如何用4个月的时间自学Python, Python 从入门到实践, python基础教程第4版pdf, 零基础入门Python, 写一个爬虫玩儿, 新手小白的Python入门指南, Python零基础入门视频, 2023版Python教程, python入门教程, 收集的Python教程与学习资源, Python教學4步驟, 以我的亲身经历，聊聊学python的流程，同时推荐学python的书, Python 计量经济学初阶教程, Python 入门系列— （9）Python 用户输入和while 循环教程, 小甲鱼零基础入门学习Python, 跟小海龟学Python少儿学编程, 童晶; 童雨涵, Python快速编程入门, 黑马程序员, Python 入门教程：开启编程之旅, 3小时入门Python无人机编程课程包含4个项目：监控无人机，人脸跟踪飞行和无人机寻线等, Python教學4步驟-自學前的必備觀念與重點, Python入门进阶讲解python进阶教程.

We need to reuse at least 20% of key words. We'll include "Python", "零基础", "入门", "第四版", maybe "爬虫", "小甲鱼". Ensure we reuse them exactly as they appear? We can reuse them directly. Likely terms like "Python", "零基础", "入门", "第四版", "爬虫", "小甲鱼", "小海龟", "童晶", "童雨涵", "黑马程序员", "无人机", etc. 20% of that is about 4 terms. Let's count distinct key terms maybe around 20. Key words: names, nicknames, distinctive terms.

So we need to include at least 4 of those words/phrases. Probably need to reuse at least 20% of the key words from the captions (names, nicknames, distinctive terms). We need to reuse at least 20% of them. We'll embed them in Chinese sentences.

We must avoid forbidden words: delve, tapestry, vibrant, testament, landscape, showcase, crucial, pivotal, additionally, moreover, furthermore, "it is important to note", "serves as", "boasts". Must end with natural invitation to view the full gallery via the link above. Avoid generic positive endings; end on a concrete fact or a plain natural invitation. Use commas or split sentences. No forced groups of exactly three items. No "At its core". Probably still apply to English but we are Chinese. Avoid "它是重要的". No inflated importance, no sales language, no clichés like "nestled", "breathtaking", "unforgettable". Also avoid "此外". Use "to" instead of "in order to". The instruction about "to" vs "in order to" is English; but we are writing Chinese, so ignore? Use "因为". So final sentence: something like "点击上面的链接观看完整画廊。" That is a plain natural invitation. No "not only X but Y". We'll just avoid those English constructs. Also no em or en dashes; we must not use — or –. Use Chinese? Also no AI-flag words.

We need 60-90 words. Let's craft about 70 words Chinese description.

We must not use markdown, no quotes. Just plain text.

We'll produce something like:

"本画廊聚焦Python零基础入门班第四版的学习氛围，展示零基础学员如何在四个月内自学编程，尝试编写简单爬虫，跟随小甲鱼的教程一步步掌握用户输入和while循环。画面中还可见童晶、童雨涵带领少儿学员玩转小海龟编程，以及黑马程序员分享的无人机项目实况。想看更多细节，请点击上面的链接观看完整画廊。"

Now count words. Could include spaces between words. But they said plain text, no markdown, no lists, no quotes. But risk of being considered weird. The requirement is words (maybe English words). In Chinese, we could add spaces between phrases to make words. But we have no spaces. The word count likely still refers to words (space-separated). The instruction likely originally for English description; but we must write in same language as title (Chinese). Safer to aim for 60-90 Chinese characters? But Chinese usually no spaces. But we are writing Chinese; each Chinese character could be considered a word? However we could insert spaces to count words. Usually they count words separated by spaces. Let's count characters? But we can't guarantee. Chinese words counting is ambiguous but we can approximate. Usually they treat each token separated by space as word. Might be safer to include some spaces? Let's add spaces to separate phrases, making each phrase a word.

Now count words: Let's count each token separated by space.

I'll count:
